

Worms & More

Vermiculture Starter System

252.482.8544

wejowers@gmail.com

The starter system consists of two (2) 16 x 16 x 8 deep bins that stack with interlocking feet. The bins are made of a good quality wood & are assembled with screws for structural integrity. The system can be expanded if desired.

The system is delivered with one bin complete with worms; food & bedding. It will take about 60 to 90 days for this bin to be ready to start the expansion. One bin is empty for expanding when the first bin is full.

How it works:

As the worms convert the waste to Vermicompost & more food is added they will migrate to the top of the bin to feed on the new food. When the contents of the bin are nearing the top you will stop feeding the worms in the bottom bin & start putting food in the top bin. As the food is completely consumed in the bottom bin the worms will migrate to the upper bin. When the majority of the worms have migrated to the top bin you can harvest the vermicompost from the bottom bin & begin the process again.

Two bins complete: \$90.00

Vermicompost for Tea: 3 lbs @ \$10.00 & Makes up to 30 gallons of VC Tea
